# Project: Interpret a Data Visualization

Source: [LinkedIn Top Skills for 2016](#)

Insight 1: From a global perspective, cloud and distributed computing skill, as well as statistical analysis and data mining skill, has become the top two skills for 2016. I selected these two skills from the dashboard, which shows 13 of 14 countries ranked either or both of them as the top one/two skills for 2016.

Insight 2: Even though the data presentation ranked as one of top 10 skills for 2016, none of the countries from the dashboard listed this skill above the global average. On the contrary, even though SEO/SEM marketing skill only ranks 9th globally, many countries such as Australia, Netherlands, and Singapore consider it as the 2nd top skill for 2016.

Insight 3: China and United States have different opinions about the ranking of job skills: China considers network and information security skill as the 2nd important skill for 2016, while this skill only ranks 6th for the U.S. The storage system and management skill ranks 4th for the U.S. while only ranks 10th for China.
